

THE VERSATILE COLLABORATIVE PLATFORM

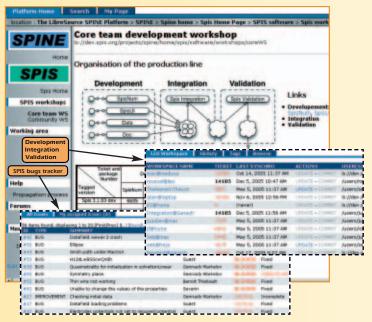

Development & Groupware

LibreSource Enterprise is a versatile collaborative platform. Modular and highly customizable, LibreSource Enterprise is perfectly adapted to the collaborative software development, groupware, e-archiving and Web publishing.

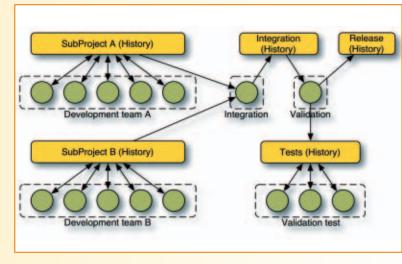

LibreSource Enterprise for a modern management and hosting of software development projects at the office or remotely:

- Software configuration management solutions including LibreSource Synchronizer and Subversion
- LibreSource Synchronizer, an advanced versioning system for cooperative file sharing
- Advanced dataflow editor for an easy modelling of development-validation processes
- Subversion SCM for improved interoperability
- Import capabilities from CVS based versioning systems

LIBRESOURCE SYNCHRONIZER KEEPS TRACK OF THE HISTORY AND CHANGES MADE ON A PART OF YOUR FILE SYSTEM. THE CONTRIBUTION TRACKING BECOMES EASIER AND CAN BE DONE LOCALLY WITH-OUT ANY NETWORK CONNECTION.

- Bug-tracker and sources code analysis tools (Synchronizer studio)
- High degree of awareness and integration of resources
- Java Web Start and Eclipse plug-in clients
- Lightweight and easy to use through any Web browsers

A DATAFLOW VIEWER HELPS YOU TO MONITOR THE STATE OF THE SYNCHRONIZERS AND MAKES A NATURAL REPRESENTATION OF THE GLOBAL DEVELOPMENT PROCESS.

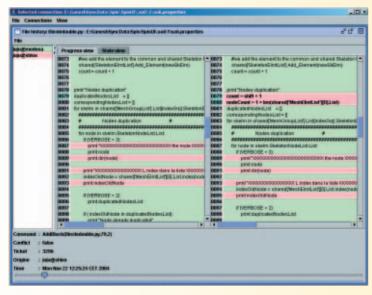

LibreSource Enterprise, the foundation stone for community leading and cooperation between distributed teams:

- Roles based access control (public/private levels, fine tuning)
- Wiki edition and advanced Web rendering
- Forums and mailing lists
- · Advanced upload/download areas
- Timeline and projects templates

- Full text search engine
- Scalability and load balancing
- Full http protocol to support communications through firewalls

A modern design and technology, an integrated solution:

- Pure JAVA/J2EE based design
- Client/server architecture
- Fully multi-platform
- High capability of integration into professional environments
- Easy to install, customize and extend
- Industrial standard

A SET OF APPLICATION TOOLS FOR ADVANCED OPERATIONS, LIKE THE FILE HISTORY BROWSER, PROVIDES A TIME NAVIGATION THAT HIGHLIGHTS FILE MODIFICATIONS TO UNDERSTAND THE CONTRIBUTION OF EACH ONES AND THE MUTATION OF SHARED DOCUMENTS.

LibreSource Enterprise's core functions are fully compliant with LibreSource Community supported by Artenum, INRIA and Paris7-Denis Diderot University.

Libre Source Enterprise 2

LibreSource Enterprise simplifies the creation of a dynamic community and its management.

Libresource Enterprise provides cooperative tools which simplify team communication and data sharing. Those facilities help to maintain and enhance team relationship in order to improve the cooperative efficiency.

You can edit your documents online thru a Wiki, upload your files to exchange areas and use the LibreSource Synchronizers to share common Workspaces.

A full text indexation helps you to find and retrieve any data stored on the platform (even files such as PDF, OpenOffice and Word files).

Effective communication is a fundamental requirement for agile project management. LibreSource Enterprise improves the communication between users by providing a consistant set of services with smart events notification: everyone is aware of any interesting action of the team.

On a single server, LibreSource can host several projects, several groups of users, and grant fine grain access to the resources. The security access is based on roles which can be extended to your needs during the evolution of your cooperative work.

LibreSource Synchronizer allows a quick integration and distribution of the source code across a team or over several computers of a single user. All the tools are included and integrated. LibreSource Enterprise is the state of art in software forge.
